VAG AWD Models – Rear trailing arm bush kit with Toe adjustment increase

SPF2536K - Rear Trailing Arm Front Bush Kit (Replaces OEM Part No 1J0505171B) Fits All Wheel Drive variations of the VAG A4 Chassis as used on the following models:

- Audi S3 & TT 4WD – 1999 to 2004
- Seat Leon 4-Motion – 1999 to 2005
- Skoda Octavia 4x4 – 1998 – 2004
- VW Golf 4Motion/R32 (1999-2004) and Bora 4Motion (1999-2002)

In addition to the usual benefits of SuperPro Polyurethane suspension bushes – long life, high performance and low vibration, this clever bush kit includes a selection of polyurethane washers. Depending on the way the kit is assembled, this can give either a standard rear wheel (toe) alignment or an increase in toe alignment range. This is of particular use on cars which have been lowered, to help achieve optimum toe alignment – or to correct an inherent toe adjustment problem outside the range of the standard settings on an un-modified car.

The kit is supplied with 4 bushes, 2 crush tubes, 4 adjusting washers and assembly grease sufficient to replace the bushes on both trailing arms. The kit is also covered by SuperPro's unique 3 Year/60,000km (36,000 Mile) warranty.

(For replacement bushings and alignment options for the rear lateral arms please see SPF2540K & SPF2541K)

Assembly of trailing arm Front Bushings

As viewed from below the trailing arms looking up to the chassis.
Note: Polyurethane bushes must be fitted to both sides of the vehicle.
